- Soft Skills : Problem Solving, Adaptive Nature, Analytical Thinking
-

Projects

Text Based Web Summerizer

Python-based web application that leverages BeautifulSoup for web scraping, NLP libraries for summarization logic, and Flask to deliver a sleek, user-friendly interface. Designed to transform lengthy webpage content into sharp, digestible summaries—perfect for anyone delving into text summarization or full-stack development.

Multimodel Music Recommendation System

2nd Sem Mini-Project; continued into 3rd Semester

Led the design and development of a cutting-edge, emotion-aware music recommendation engine. This innovative system combines facial emotion detection (via CNN-based analysis of user images) with mood-tagged song selection using content-based filtering. Result: real-time, mood-aligned music suggestions that deepen emotional connection and user engagement.

E-commerce Shopping Application

Built a full-featured online shopping platform using Spring Boot 3 and Java 17, paired with MySQL for database management and Thymeleaf for elegant server-side rendering. Features include:

- Admin Dashboard
- User Authentication

- Shopping Cart & Order Management

Face Recognition Attendance Management System	
Developed a face-based attendance automation tool using Python, leveraging face_recognition, OpenCV, and Tkinter to streamline attendance tracking. The system detects faces in real time, identifies registered individuals, applies color-coded marking, logs timestamps, and allows onboarding of new faces via a user-friendly desktop interface.
