SUMMARY

My journey began with a Commerce, but I found my true calling in the tech space. Before stepping into the realm of tech and management, I gained valuable experience working as an associate at Writer Corporation. This role ignited my passion for the dynamic intersection of business and technology. Now, I'm eager to explore the exciting fields of cyber security and machine learning—areas that not only challenge me but also fuel my curiosity about how we can shape a safer and smarter future. I believe in the power of technology to transform lives, and I'm committed to being part of that change. Whether it's enhancing security measures or unlocking the potential of machine learning, I'm excited about the endless possibilities that lie ahead.

EXPERIENCE
